

Password Strength Checker - Cyber Security Report

Name: Girma Tamene

CIN: FIT/APR26/CS7902

Introduction:

This project is a Password Strength Checker developed using JavaScript. It evaluates password strength using cybersecurity rules.

Objectives:

- Analyze password strength
- Apply security rules
- Prevent weak passwords

Tools Used:

- HTML
- JavaScript

Key Features:

- Weak, Medium, Strong detection
- Hacker-level rules
- User feedback
- Progress bar

Methodology:

The system checks length, character types, common passwords, repeated and sequential patterns.

Results:

The system identifies weak passwords and improves security awareness.

Conclusion:

This project demonstrates practical cybersecurity knowledge in password protection.
