

Phishing Email Detection & Awareness System - Report

Name: Girma Tamene

CIN: FIT/APR26/CS7902

Introduction:

This project detects phishing emails using rule-based analysis. Phishing attacks trick users into revealing sensitive information.

Objectives:

- Detect phishing emails
- Identify suspicious patterns
- Improve user awareness

Tools Used:

- HTML
- CSS
- JavaScript

Methodology:

The system analyzes email content and checks for keywords, links, fake domains, and attachments.

Key Features:

- Detects suspicious keywords
- Identifies links
- Detects spoofed domains
- Classifies emails

Results:

The system classifies emails as Safe, Suspicious, or Phishing.

Conclusion:

This project demonstrates basic phishing detection and cybersecurity awareness.
